

## Snuff Bottle

### Date

1644-1911

### Medium

Peking glass

### Description

Snuff bottles were introduced to China by Jesuit Missionaries during the early Qing Dynasty (1644-1911). The solution inside is made by grinding dried tobacco leaves into a fine powder and mixing it with spices, herbs and aromatics. When inhaled through the nose it gives the user a nicotine rush. Though modern science suggests that long term use of snuff can lead to chronic health issues, during the Qing dynasty it was used medically to cure headaches, stomach ailments, coughing and other maladies. The Kangxi Emperor (r. 1661-1722) is credited with the development of handheld snuff bottles around the end of the 17th century. These small, airtight

containers solved the issue of snuff being ruined by China's high humidity. The bottles took many forms and could be made from glass, various minerals, metals, porcelain, and internally painted glass. This carved multicolored peking glass snuff bottle has depictions of red and white animals in low relief on both sides and the Chinese character for longevity (Shou) on the front. Flower petals adorn the base of the bottle. There is no stopper attached to the top.

### Dimensions

2 1/4 × 1 1/2 × 3/4 in. (5.7 × 3.8 × 1.9 cm)
